KIN HAI

San Jose, CA · (669) 350-4814 · kinhai@outlook.com · linkedin.com/in/kinhai · kinhai-collab.github.io/portfolio

PROFESSIONAL SUMMARY

AI Product Manager with 10+ years shipping products where failure has a measurable daily cost — FDA-regulated biotech, financial services compliance, and production AI systems trusted to act autonomously on behalf of real users. MIT AI & ML Certificate (Top 10%) · Certified AI Product Manager (CAIPM). Consistent pattern of expanding into organizational gaps and delivering where others could not: only on-time go-live across a 4-continent $500M+ program at Genentech; rescued a 2-year stalled program at Lumentum; designed a dual-track C-suite compliance strategy at SVB that avoided $20M+ in penalties.

CORE SKILLS

AI Product: Agentic AI design · ReAct orchestration · RAG architecture · Multi-agent systems · Multi-tier model routing · HITL design · Confidence gate engineering · LLM evaluation · AI evals · Voice AI (STT/TTS) · LLMOps · Prompt engineering

Product: 0→1 product development · AI roadmapping · Business case authorship · Data-driven prioritization · OKRs & KPI ownership · User research & VoC · Freemium GTM · PRD authorship · Cross-functional stakeholder alignment · SDLC ownership

Technical: FastAPI · Python · AWS Lambda/ECS · PostgreSQL · pgvector · Redis · OAuth 2.0 · OpenAI API (GPT-4o-mini/GPT-4o) · ElevenLabs · LangChain · MCP (Model Context Protocol) · SAP S/4HANA · EWM · SECS/GEM

Regulated Domains: FDA/GxP · DSCSA · PSD2 · SOX · Biotech drug distribution · Financial services API compliance

PROFESSIONAL EXPERIENCE

Head of Product — Jun 2025 – Present

Mira AI · Voice-First Agentic AI Assistant · San Jose, CA

Mira is a production AI assistant that manages calendars and email autonomously for mobile professionals — acting on their behalf when they cannot look at their phone.

- **Decided to build autonomous execution over simple scheduling assistance —** shipped a production voice-first agentic AI assistant (iOS/Android, March 2026) from zero; designed three-tier model routing (DIRECT / SIMPLE / ORCHESTRATED) using GPT-4o-mini for intent classification and GPT-4o for complex ReAct reasoning, cutting per-session inference cost 40% with no measurable accuracy loss.
- **Designed trust architecture to balance autonomous action with user control —** three-tier confidence gate (≥0.85 silent execute · 0.60–0.85 soft confirm · <0.60 clarification) and HITL mandatory confirmation for all destructive operations; derived directly from 127 user interviews — behavioral research, not assumptions.
- **Owned RAG-powered memory as a compounding data flywheel —** two-tier pgvector design (30-day TTL short-term + permanent user facts, 1536-dim embeddings) with LLM-driven fact lifecycle; built scenario-based eval system benchmarking GPT-4o-mini vs. GPT-4o across intent accuracy, latency, and cost — driving ongoing model routing decisions in production.
- **Led 10 direct reports on equity-only structure; conducted 127 user interviews;** built 200+ organic waitlist — cold outreach to realtor associations and parent groups outperformed all warm channels; 70% WAU in closed beta; ranked #1 / 20+ products in Dr. Nancy Li AIPM Accelerator — Outstanding Product Leader award.

Senior PM, Supply Chain Platform — 2023 – Dec 2025

Genentech (Roche) · Biotech Manufacturing · San Francisco, CA

- **Built LLM-based tools on Roche's enterprise AI infrastructure to validate requirements completeness post-capture —** analyzed L4 process maps against S/4HANA module capabilities to flag missed cross-workstream dependencies before testing; separately built AI-assisted SOP comparison tool to cross-reference legacy WMS procedures against new EWM workflows during DC documentation rewrite across Hillsboro and Kentucky sites; later productized both workflows as portfolio prototypes (ProcessLens, SOPGen).
- **Secured written executive approval and $2M budget for AI roadmap —** designed ML-driven warehouse path optimization initiative presented to CEO level; rebuilt pick/pack/ship workflows across 5 sites to generate structured operational data required as the AI foundation.
- **Only on-time go-live across a 4-continent $500M+ global SAP EWM program —** all four other continental deployments went late; diagnosed systemic testing gap no other region caught; led 25-person cross-functional team across 5 NA sites through concurrent requirements, build, and testing tracks.
- **Invented the Day-in-the-Life (DIL) testing framework —** proposed it to leadership, received formal approval and expanded cross-functional authority over finance, procurement, master data, assets, and MES; cut post-launch defects 60%; adopted as company-wide standard across 5 US sites and 15 teams; formally adopted globally after NA results.

- **Led DSCSA crisis recovery with $10M/day on the line —** VoC workshops and systems walkthroughs diagnosed root causes; directed build of custom pick routing tool and pre-EWM SKU scanning interface deployed to live production; parallel-track recovery restored 100% DSCSA compliance in 8 weeks, eliminated 3 weekly violations, drove truck on-time rates 70% → 100%, eliminated weekend overtime.

Product Lead, Manufacturing Platform — 2020 – 2023

Lumentum · Optical & Photonic Manufacturing · San Jose, CA

- **Decided to reset a 2-year stalled program to phased MVP strategy —** diagnosed waterfall failure, proposed and sold complexity-segmented rollout to VP leadership (MVP0: cloud setup; MVP1: simple projects; MVP2: complex/linked; MVP3: legacy decommission); delivered across 9 global semiconductor fabs in 4 months, 82% adoption in 30 days, zero incidents; CEO Alan Lowe Award.
- **Expanded scope to lead $20M MES program across 5 global fabs —** selected after year-long failed search based on trust earned from Jira delivery; created program from scratch; volunteered to work UK hours for one year as acting PM when no onsite PM existed.
- **Drove $30M+ savings and 80% equipment downtime reduction through product decisions —** scoped equipment integration by readiness tier, defined real-time machine status UI replacing manual tracking, sequenced recipe migrations by production impact, produced firmware vs. replacement analysis for management; instrumented data capture as deliberate ML training foundation for future predictive maintenance and yield optimization.

Senior PM, Core Banking & API Products — 2017 – 2019

Silicon Valley Bank · San Francisco, CA

- **Built business case and drove greenlight for credit origination system —** discovery with MD and customers, vendor evaluation, integration, testing, go-live; 84% reduction in loan processing turnaround time; end-to-end loan lifecycle digitized.
- **Designed dual-track PSD2 compliance strategy under C-suite pressure —** SVB was 3–6 months from violation; ran 2-week sprint with architect, developers, and UK CCO; built parallel regulator engagement track that secured formal timeline extensions; defended plan to COO directly — accepted in full; delivered 6 months early, avoided $20M+ in penalties; authored traceability playbook mapping every PSD2 requirement to engineering tasks — became SVB standard; 35% API adoption growth.

Management Consultant, Global ITSM — 2019 – 2020

ServiceNow · Santa Clara, CA

- **Decided to scope SACM program to live assets first —** delivered IT asset visibility dashboard tracking 10,000+ production service assets globally; pivoted at-risk program to hit deadline.
- **Owned GTM strategy for global Box → OneDrive migration across 5 international offices —** designed user education programs (lunch and learns, vendor demos, roadshows); CIO Award runner-up.

AI PROJECTS & LIVE PRODUCTS

ProcessLens · 2026 · AI-powered L4 process gap analyzer — ingests process maps, flags S/4HANA coverage gaps and cross-workstream dependencies, generates test cases · Live demo · kinhai-collab.github.io/portfolio/processlens.html

SOPGen · 2026 · GxP SOP generator with differential analysis, two-stage review (SME → Process Owner), ALCOA+ audit trail · Live demo · kinhai-collab.github.io/portfolio/sopgen.html

ImBranding · 2026 · AI brand voice & multi-platform content agent (Claude, Grok) · Live freemium · kinhai-collab.github.io/imbranding

ByteSize · 2026 · AI YouTube summarization with audio narration (Claude, TypeScript) · Live · video-summarizer.replit.app

Multi-Agent Orchestration Demo · In Progress · LangGraph-based multi-agent system · Public GitHub + portfolio on completion

EDUCATION & CERTIFICATIONS

MIT Professional Education — AI & ML Certificate · Top 10 Percentile · 2025
Computer Vision · NLP · Machine Learning · Edge AI

Certified AI Product Manager (CAIPM) — Dr. Nancy Li AIPM Accelerator · #1 / 20+ products · 2025

MBA — Big Data & Business Analytics US-evaluated (AACRAO / Validential Corp.)

PMP · CSM · CSPO
